

SMART PRETRIAL IMPLEMENTATION PLAN

GOAL #1: [EXAMPLE] By February 2016, implement a pretrial risk assessment tool that is administered and reviewed by a judicial officer within 24 hours of booking into the jail.

GOAL NARRATIVE: *The use of pretrial risk assessment is supported through research. By selecting an actuarial risk tool and validating it on our local pretrial population, we can identify individuals who are at lower risk for FTA or new pretrial criminal activity and who can be released outright or released with conditions, and those at higher risk who will be preventively detained. Research has also demonstrated that detaining lower risk individuals for more than 24 hours can have detrimental effects, so by implementing 24/7 risk assessment capacity and 3x/day review by a judicial officer will expedite release of low risk individuals, and offer more information when making bail decisions about higher risk individuals at first appearance. Our jurisdiction has already selected a risk assessment tool, and now operational processes need to be put in place.*
